**AvaLAN Wireless Relocates to New Corporate Office
and Expands Manufacturing Capabilities**

Dramatic growth prompts need for additional space to house staff and meet production demands

MOUNTAIN VIEW, Calif., June 5, 2007— AvaLAN Wireless Systems, an innovator in the wireless Ethernet market, recently moved to larger corporate offices to accommodate growth of its overall business and an increase in personnel.

With several new hires on the team, AvaLAN Wireless moved its corporate headquarters from Palo Alto to Mountain View, Calif., to a location that doubles its square footage in order to house the staff additions.

“We have doubled sales thus far in 2007 compared to the same period last year,” said Ray Shilling, Vice President of Marketing, AvaLAN Wireless. “As a result of this dramatic growth rate, we are pleased to move to the larger facility to accommodate additional staff, and to better serve all of our customers and OEM partners.”

According to Shilling, the growth for the company has been nothing short of explosive. To respond to the early market demand from a series of new products launched this year, AvaLAN recently hired security industry veteran Richard Ramm as its National Strategic Account Manager for the Physical Security market. Lauren Hastings joined as its new Marketing Manager to help handle the burgeoning sales and marketing workload.

AvaLAN Wireless’s long-range wireless Ethernet bridge devices enable surveillance cameras, digital signage, biometric scanners, access control and industrial networking devices to operate wirelessly, replacing costly wiring.

In another move, the company left its former manufacturing contractor in Denver, Colo., last month to work with a much larger contract manufacturer in Arizona. The new business partner has the capacity to build several thousand units a month, compared with 500 units previously.

“We have dramatically increased our overall capabilities and production capacity,” Shilling said. “We have quadrupled our manufacturing capability to keep up with market demand for our products.”

AvaLAN Wireless Systems, Inc.

AvaLAN Wireless Systems, Inc. is a specialist in the long range Wireless Ethernet market. It offers non line-of-sight 900 MHz and line-of-site 5.8 GHz wireless Ethernet transmission products in both point-to-point and point-to-multipoint configurations. AvaLAN’s solutions offer affordable Ethernet connectivity at the network’s edge. With both indoor and outdoor models available, and a full line of specialty 900 MHz and 5.8 GHz antennae, AvaLAN provides its customers with a way to replace costly wiring with a wireless Ethernet bridge that can remotely enable surveillance cameras, digital signage, biometric scanners, access control devices, remote

printers, industrial networking and internet kiosks. AvaLAN's products offer the ideal combination of price, data rate, security, interference avoidance, quality-of-service and ease-of-use that professional installers and consumers are demanding.

AvaLAN Wireless Systems Inc. is headquartered in Mountain View, California and can be contacted at 866-533-6216, by email at info@avalanwireless.com, or by visiting www.avalanwireless.com.
