MikroTik introduces RouterBOARD Crossroads

RIGA, LATVIA, January 10, 2008 — MikroTik is proud to introduce the new tiny CPE/AP device, Crossroads, already shipping to distributors. It is much smaller than any wireless device previously made by MikroTik and has a powerful integrated 802.11b/g wireless part and is FCC certified. Faster than most devices in this price range, the RouterBOARD Crossroads has a powerful onboard wireless radio, and supports PoE - just plug in one ethernet cable and your CPE is ready for set-up. Crossroads also includes RouterOS - the operating system which will turn this small system into a highly sophisticated router/firewall/bandwidth manager or hotspot. And all this - at a very affordable price.

About MikroTik

MikroTik was founded in 1995 to develop routers and wireless ISP systems. MikroTik now provides wireless ISP systems for Internet connectivity in many countries around the world - some locations are Iraq, Kosovo, Sri Lanka, Ghana, United States and many others. Our experience in using industry standard PC hardware and complete routing systems, like RouterBOARD 200, has developed into the MikroTik RouterOS software system that provides extensive stability, controls, and flexibility for all kinds of data interfaces and routing.
