

February 2009

MTI Wireless Edge to Showcase at CeBIT its New Low Cost High Gain Semi Parabolic Grid Antennas for WiMAX Frequencies.

MTI Wireless Edge is proud to announce the availability its new high gain, high quality, low cost, light weight, aluminum die cast, semi parabolic grid antennas for 2.3-2.9GHz, 3.3-3.8GHz and 5.15-6.0GHz WiMAX frequencies. These new antennas will be exhibited in the CeBIT trade show in Hannover Germany next week.

TEL AVIV, Israel – February 25, 2009 - MTI Wireless Edge announced the availability of High Gain, Semi Parabolic Grid Antennas to include additional frequency bands. With the recent addition of additional antennas, the new family of High Gain, Semi Parabolic Grid Antennas, now includes the frequency ranges of 2.3-2.9 GHz, 3.3-3.8 GHz and 5.15-6.0 GHz with Gain of 24 dBi, 26 dBi and 29 dBi respectively.

MTI's new family of High Quality Low Cost Semi Parabolic Grid Antennas is a suitable solution for Point-to-Point (PtP) radio links as well as for remote Point-to-Multipoint (PtMP) and WiMAX subscriber end. Those antennas very light weight and very low wind load, make them ideally suited for installation on any tower type structure. The installer friendly mounting kit allows for simple installation and easy pointing of the antenna with short installation time. Unlike some other similar product in the market, the MTI antennas are completely weather and environment proof with UV, rust and salt atmosphere protection to provide an extended outdoor operational life time under extreme weather and environmental conditions.

Dov Feiner, CEO & President, MTI Wireless Edge Ltd, mentioned "With those new Semi Parabolic Grid Antennas, we are responding to the growing demand for High Gain antennas to complement our traditional flat panel antennas portfolio in order to strengthen our one-stop-shop position." The new antennas are planed according to the 35 years' legacy of MTI of bringing high quality along with low cost. For this reason the new grid antennas are high quality die cast as well as very light weight.

About MTI Wireless Edge Ltd.

MTI Wireless Edge is a world leader in the development and production of high quality, low cost, flat panel antennas for WiMAX, Fixed Wireless and RFID applications. MTI has more than 35 years' experience in supplying antennas for both military and commercial applications from 100 KHz to 40 GHz. MTI flat panel antenna range includes base station, subscriber and omnidirectional antennas for all broad and narrow band WiMAX and fixed wireless applications in both licensed and unlicensed bands. MTI Military products include a wide range of broadband, tactical and specialized communications antennas, antenna systems and DF arrays installed on

numerous airborne, ground and naval, including submarine, platforms worldwide.
