

April 2008

LigoWave is pleased to announce the launch of its Point-to-Point backhaul product line!

April 24, 2008 - At TCP data rates of 70 Mbps, the 5 GHz Point-to-Point products are unparalleled in the market today.

Using selective repeat ARQ technology (TDD) for throughput optimization and 500 mW of available output power, these products deliver the most stable, high-performance links for ultra-high bandwidth backhaul applications. Point-to-Point solutions are available in N-connector and integrated antenna configuration, and also available on the 900 Mhz spectrum for non-line-of-sight backhaul applications.
